HOW ABHED IS PRICED

Pure usage: pay for the actions Abhed governs and the agents that ran. Never for safety.

What is metered	Price
Free every month	**10,000 actions + 2 agents**
Governed actions up to 10 lakh a month	₹40 per 1,000 (₹0.04 each)
from 10 lakh to 1 crore	₹20 per 1,000
above 1 crore	₹10 per 1,000
Active agent, for each month it ran	₹500 read-only ₹750 writes inside limits ₹1,000 money, health data or prices
Checkpoints, phone approvals, escalations, audit PDFs, signed ledger	**₹0, unlimited**
LLM calls through Abhed's gateway (optional)	at cost + 10%, or bring your own key

No plans, no minimum, no lock-in. Billed monthly on actual use. Prices exclude 18% GST. The two free agents are the two cheapest that ran.

A "governed action" is

One call an agent (or person) makes through Abhed: a lookup, a refund, an email, a price change. Each one is checked, decided and written to the signed ledger, whether it was allowed, held or blocked.

WHY PURE USAGE

- **It starts at zero.** A company can run its own data through Abhed before any purchase order, which is exactly how we want to win the first meeting.
- **The bill follows the value.** More agents doing more real work means more risk removed and more audit evidence created. Quiet months cost little.
- **Fair to small and large.** A startup pays a few thousand rupees; slabs make each action up to 4× cheaper at scale, which large buyers expect.
- **The right incentive.** We never charge for a checkpoint or an approval. If we did, customers would learn to check less, the opposite of what Abhed is for.
- **Simple to explain.** Two meters (actions and agents), one free allowance, one calculator.

WHAT WE METER, AND WHAT WE NEVER METER

Item	Why
Actions	The unit of work we decide, record, sign and anchor. It is also what drives our cost: compute, storage and the ledger.
Agents	Each carries a key, a passport, delegations, monitoring and a Trust Score. Riskier agents need more checks and more evidence kept, so they cost more.
Never metered	Checkpoints, approvals, escalations, audit PDFs and the ledger: the safety itself.

HOW WE SET EACH NUMBER

Every price is anchored to what the market already pays, then set below it for India

Our price	Market reference	Reasoning
₹40 → ₹10 per 1,000 actions	AWS AgentCore Policy: about $0.025 per 1,000 authorization checks, roughly ₹2.3–2.4 at ₹90–96 per dollar.	AWS sells one policy check. Each Abhed action gets eight checks plus grounding against real records, a signed ledger entry, phone approvals and audit evidence. At scale we charge about 4× one AWS check for all of that.
₹500–1,000 per agent a month	Microsoft Agent 365: $15 per user a month (about ₹1,350–1,450), and it needs Microsoft 365 E5.	Our unit is the agent, not a person, and needs no other licence. Even our riskiest agent costs less than one Microsoft seat.
Free 10,000 actions + 2 agents	Lakera Guard is free up to 10,000 requests a month; Langfuse has a free tier.	Free tiers are normal in AI tooling. Ours is enough to test real data, not enough to run a business on.
Slabs: 40 → 20 → 10	Langfuse lowers its unit price as volume grows; enterprise buyers expect volume discounts.	A large enterprise pays ₹0.039 per action against ₹0.047 for a startup, and the per-action price keeps falling.
Overall, at enterprise size	IBM watsonx.governance: about $3,500–6,450 a month (third-party estimates), roughly ₹3.2–6.2 lakh.	Our 100-agent, 50-lakh-action example is ₹1,93,600 a month, and it governs actions, not only models.
Rupee pricing	Indian buyers typically pay 40–60% of US list prices.	Priced in rupees, plus GST, with no dollar exposure for the customer.

WORKED EXAMPLES, STEP BY STEP

Startup · 3 agents · 50,000 actions

```
actions: (50,000 − 10,000) × ₹0.04 = ₹1,600
agents: 3 writers, 2 free → 1 × ₹750 = ₹750
```

₹2,350 a month · ₹0.047 per action

Mid-size bank · 20 agents · 8 lakh actions

```
actions: 7,90,000 × ₹0.04 = ₹31,600
agents: 5 read-only (2 free) → ₹1,500
  7 writers → ₹5,250 · 8 money → ₹8,000
```

₹46,350 a month · ₹0.058 per action

Enterprise · 100 agents · 50 lakh actions

```
actions: 9,90,000 × ₹0.04 = ₹39,600
  + 40,00,000 × ₹0.02 = ₹80,000
agents: 28 + 40 + 30 → ₹74,000
```

₹1,93,600 a month · ₹0.039 per action

VALUE, RISKS, AND ANSWERS FOR THE JURY

Is it worth it, and what could go wrong with usage pricing?

VALUE FOR THE MID-SIZE BANK (₹46,350 A MONTH)

86%
of the month paid back by one stopped ₹40,000 wrong refund

1–2
operations staff: roughly what the bill costs (₹20,000–45,000 a month each)

1 click
audit PDF instead of days of pulling logs for a regulator

₹0
lost to a blocked bulk export of customer data

RISKS OF PURE USAGE PRICING, AND OUR ANSWER

Risk	Answer
The bill is hard to predict	Free allowance, a live calculator, and slabs that only lower the rate. Usage alerts are on the roadmap.
A runaway agent runs up the bill	Already built: the circuit breaker pauses an agent that repeats the same call 5 times in 2 minutes.
Finance wants a fixed budget	Large customers can prepay usage for a year at a discount; it is still metered on actual use.
Low revenue from small users	Fine by design: they are our pipeline, and slabs keep big customers paying fairly.

IF A JUDGE ASKS

- **“Isn’t ₹0.04 an action expensive next to AWS?”** AWS prices one policy check. Ours is the whole action: eight checks, grounding against real records, a person when needed, a signed record and the audit. At volume it falls to ₹0.01.
- **“How do you make money if approvals are free?”** From actions and agents. Approvals are a small share of actions, and the decision is code, so serving them costs very little.
- **“Why not fixed plans?”** Usage lets anyone start free and pay only as agents do real work. For a fixed budget, a customer can prepay usage.
- **“Who pays first?”** Banks and NBFCs (RBI FREE-AI), hospitals and insurers (DPDP Act), e-commerce and fintech. The buyer is the CRO or CISO.
- **“Why should India buy this and not IBM or Microsoft?”** Rupee pricing, no prerequisite licences, any model or framework, and it governs the action itself, not just the model or the identity.

One line for the pitch

“Pay only for what your agents do: ₹40 per thousand actions, falling to ₹10, plus ₹500–1,000 per agent. The first 10,000 actions are free, and approvals are always free, because safety should never cost extra.”
