Abhed — Deployment Guide

Step-by-step: Vercel (main) + Render (4 demo sites) + Supabase

Verified: typecheck clean, 62/62 tests pass, next build succeeds.

0. WHAT GOES WHERE

- Abhed main (app/, lib/, components/, proxy.ts) -> Vercel
- NovaBank / Sanjeevani / Bazaar (sites/server.mjs + SITE=...) -> Render
- Zentro Logistics (sites/zentro/server.mjs) -> Render
- Shared world + accounts -> Supabase table abhed_state

Frontend: Next.js App Router (home/site/os/auth/approver/attack).
Backend: /api/*, /api/v1/* (SDK), /api/gw/v1/* (OpenAI-compatible).

1. PREREQUISITES

1) GitHub repo naitik2043/Abhed. 2) Vercel + Render + Supabase accounts.
3) Optional Groq/Gemini keys for real LLM planner. 4) Node 20+.

2. SUPABASE FIRST (5 min)

1) New project, copy SUPABASE_URL + publishable SUPABASE_KEY.
2) SQL: create table abhed_state(id text pk, version bigint, world jsonb, updated_at).
3) Allow read+write on this table. 4) curl REST -> [] expected.
Without keys app runs in memory (phones wont share world).

3. LOCAL VERIFY

npm install / npm run typecheck / npm test (62/62) / npm run build.
Sites locally: SITE=novabank KAVACH_URL=http://localhost:3000 node sites/server.mjs

4. PUSH GITHUB (50+ step-by-step commits, never one giant commit)
git init; remote add origin https://github.com/naitik2043/Abhed.git
git branch -M main; commit folder-by-folder; git push -u origin main.
.env* ignored, only .env.example (placeholders) committed.

5. VERCEL MAIN APP (10 min)

Import repo, Next.js, region bom1 (vercel.json). Build npm run build.
Env: SUPABASE_URL, SUPABASE_KEY, GROQ_API_KEY?, GEMINI_API_KEY?, DIRECTOR_KEY?.
Deploy. GET /api/health must show store:supabase. Signup + /demo must work.

6. RENDER DEMO SITES (15 min, Blueprint via render.yaml)

New > Blueprint > select repo > Apply (4 services).
Build npm install. Start node sites/server.mjs (zentro: node sites/zentro/server.mjs).
Health /health. Free tier sleeps ~50s cold start (normal).
SDK sites env: SITE, KAVACH_URL (no slash), ADMIN_PIN, KAVACH_KEYS={}, KAVACH_ADMIN_KEY empty.
Zentro env: only ADMIN_PIN.

7. LINK SITES TO ABHED (pairing, 2 min/site)

SDK: Connect > SDK > Generate code (10 min) > site /admin > PIN > paste > Pair.
Fleet must show agents online (Rex/Aria, Rxa/Claimy, Shoppy/Pricer).
Zentro no-code: Connect > No code > copy Base URL + kv_gw_* > Zentro /admin > AI provider, stream:false.
curl /api/gw/v1/models with Bearer key must list models.

8. E2E PROOF

Rex Rs.40000 held > approve on /approver phone > ledger > /ledger verify passes.
Hidden-instruction export BLOCKED + agent paused. New key revokes old (401).

9. TROUBLESHOOTING

store=memory -> add Supabase vars + Redeploy. 401 -> rotate key. fetch failed -> fix URL.
stream error -> stream:false. Agent 3F2A -> You are <Name> or user field. 429 /admin -> wait 60s.

10. ENV REFERENCE

Vercel: SUPABASE_URL*, SUPABASE_KEY*, GROQ/GEMINI?, DIRECTOR_KEY?.
Render SDK: KAVACH_URL*, SITE*, ADMIN_PIN*, KAVACH_KEYS (pairing), KAVACH_ADMIN_KEY (pairing).
PORT auto on all hosts; start script is next start.
